THE

Chapmans and Travellers

ALMANACK

For the Year of *CHRIST*

1695.

Wherein all the Post-Roads, with their several Branches and Distances, the Market, Fairs, and Markets in *England* and *Wales*, are Alphabetically disposed in every Month; so that the Place where, and the Days on which any of them are kept, is immediately found out.

To which is added

A TABLE of ACCOUNTS

For the *Buying* and *Selling* of any *Commodity*, by *Number*, *Weight*, or *Measure*, from One *Farthing* to Ten *Pounds*: and of any *Quantity*, from *One* to *Ten thousand*.

With a Sun-Dial, and other Tables and Things Useful for

All *Travellers*, *Traders*, or *Chapmen* whatsoever.

ALSO,

The Rising and Setting of the Sun and Moon, the Tides, and whatsoever else is necessary for an Annual

ALMANACK.

LONDON Printed by *T. H.* for the Company of STATIONERS 1695.

A Brief CHRONOLOGY.

THE Conquest of *England* by Duke *William*, 621
The Invention of Guns 345
The Art of Printing was invented 245

The Moon comes to the South at Night.

The Moon comes to the South in the morn.

The Moon shines at Night.

The Moon shines in the Morning.

IN the Fifth Column of this *Almanack*, you have the *Age* of the *Moon* standing against every day in the Year, by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the Moon will be just in the South, either evening or morning.

II. How many hours and minutes she will *shine*, either at night or next morning.

III. At what time the Moon *riseth* or *setteth*.

IV. The *hour* of the *night*, by the *shadow* of the *Moon*, upon any *Sun-Dial*.

I. To find at what time the Moon will be due South.

Example, Upon the 15 of *March*, the Moon being then 10 days old, I would know at what time the Moon will be upon the *Meridian* or *South*.

Look in the first Column of this Table for 10, the *Moons Age* increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the *Moon* will be just *South* in the even.

II. To find how long the Moon shineth.

Example, Upon the 11 of *March*, the Moon that day being 6 days old, I would know how many hours and min she *shineth* that night.

Look for 6 (the *Moons age*) in the firſt Column of this Table, and right againſt it (in the third Column) you ſhall find 4 hours 48 min. and ſo long will the *Moon ſhine* that *Evening*, becauſe the Moon increaſeth.

III. To find at what time the Moon Riſeth and Setteth.

1. If the Moon be increaſing, that is, if ſhe be leſs than 15 days old, *adde* the hours and minutes of her *ſhining*, to the hours and minutes of the the *Suns Riſing*, and the ſum will be the time of the *Moons Riſing*. But,

2. If the Moon be decreaſing, that is, if ſhe be above 15 days old, *ſubſtract* the hours and minutes of her *ſhining* from the hours and minutes of the *Suns Riſing*, and the remainer will be the time of the *Moons Riſing*.

For the Moons Setting.

1. If the Moon be leſs than 15 days old, *adde* the time of her *ſhining* to the time of the *Suns ſetting*, the ſum is her *ſetting*. —— But

2. If the Moon be above 15 days old, *ſubſtract* her *ſhining* from the *Suns ſetting*, the remainer is her *ſetting*, adding or ſubſtracting 12 hours if need be.

IV. To find the hour of the Night by the *Moons* Shadow on a Sun-Dial.

Find at what time the Moon comes to the South as before; which known, mark how much the Shadow upon the Dial wants of 12; which take from the time of the Moons coming to the South, the remainder is the hour of the Night. But if the Shadow be paſt 12, add thoſe hours to the coming to the South, and the ſum is the hour of the Night.

Example. Upon the 16 of *April*, the Moon being 13 days old, and comes to the South at 20 h. 24 m. and that Night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the Night—— But if the Shadow had been 2 h. 30 m. after 12, thoſe added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the Night.

A Table of Interest for several Sums of Money, at the rate of 6 in the Hundred, for divers Months and Days, *Viz.*

Derby	13	Llanibither	3	Salisbury	6

The Use of the SUN-DIAL.

For the ready finding of the hour of the Day by this *Dial*, you must provide a streight Staff or Ruler, which must first be divided into Ten equal parts, and then each of those into ten other smaller parts, so will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, *&c.* to 100: And so is it fitted for Use,

Now when you would find the hour, you must erect your Staff or Ruler perpendicular, that is, set it upright upon some plain level ground, floor, or table, and note the place where the end of the shadow did fall, and with your Staff measure the length of the shadow in Staves lengths, and hundred parts of the length, according as 'tis numbred.

Example, Suppose that upon the 16 day of *January* I do erect my Staff perpendicular, and measuring the length of the shadow thereof, I find it to be exactly 3 times its length; wherefore, finding the 16 day at the top of the moneth of *January*, I find 3, 0 to stand against the 16 day, and at the top find XII, which tells me it is then just 12 a Clock. —— *Example* 2. Suppose that upon the 6 of *May* I erect my Staff as before, and measuring the shadow thereof, I find it to be twice the length of the Staff, and 24 parts more, wherefore, I look at the top of the Dial in *May*, for the 6 day, and casting my eye along that line, towards the right hand, I find 2, 24, to stand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. —— *Example* 3. Upon the 16 of *April*, I find the length of the shadow to be once the Staffs length and 30 parts more; I look in *April* for the 16 day in the Sun-Dial, and in the line against it for 1, 30, and against it in the fifth Column I find 1, 33 (which is the neareſt number neareſt to 1, 30, in the Table) over which there ſtands IX and III, which ſhews that it is almoſt 9 in the morning, or a little after 3 in the afternoon. —— *Example* 4. Upon the 26 of *June* I find the length of the shadow of the Staff to be once the whole length, and 20 parts; if I look for this number 1, 20, in the Sun-Dial againſt the 26 of *June*, I can find no ſuch number, but the neareſt to it leſs in that line is 1, 01, over which ſtands IX, III, and the neareſt number to it, greater, is 1, 38, over which ſtands VIII, IV, by that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon. A little practice will make all this plain: For *Uſus optimus Magiſter.*

THis Table will serve for many good purposes, but it is here principally intended for the Chapmans use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, &c. And its use is very easie, as by

EXAMPLE I.

At 9 d. the Yard, what will 70 yards come to?

Look for 9 *d.* at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, and under 9 *d.* you shall find 2 *l.* 12 *s.* 6 *d.* And so much will 70 Yards at 9 *d.* the Yard come to.

Also, *At 5 d. the Gallon, 500 Gallons will come to* 10 *l.* 8 *s.* 4 *d.*

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and adde them together, and the sum shall answer your Question.

EXAMPLE II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

	l.	s.
70 Dozen at 7 *s.* comes to	24	10
8 Dozen at 7 *s.* comes to	2	16
The Sum	27	06

So that 78 Dozen at 7 *s.* the Dozen, come to 27 *l.* 6 *s.*

EXAMPLE III.

At 3 s. 5 d. 3 q. the Ell, what will 300 Ells come to?

	l.	s.	d.
300 Ells at 3 *s.* comes to	45	0	0
300 Ells at 5 *d.* comes to	6	5	0
300 Ells at 3 *q.* comes to	0	18	9
The Price of 300 Ells	52	3	9

EXAMPLE IV.

At 7 d. halfpeny the Pound, what will 92 Pound come to?

	l.	s.	d.
90 Pound at 7 *d.* the Pound, comes to	2	12	6
2 Pound at 7 *d.* the Pound, comes to	0	01	2
90 Pound at a halfpeny, comes to	0	03	9
2 Pound at a halfpeny, comes to	0	00	1
The Price of 92 Pound, at 7 *d.* 2 *q.*	2	17	6
